

Passive Solar Design Policy

Statement: This is to establish a minimum passive solar plan requirement by adding the note below to the plan set

Note on plans:

Southern windows do not need to meet the requirement in the 2012 IRC Table N1102.1.1 (R402.1.1) due to home's passive solar design

Windows will have a U-Value of \_\_\_\_\_

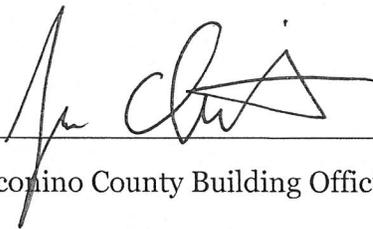

Windows will have a Solar Heat Gain Coefficient of \_\_\_\_\_

Thermal mass used to store the gained solar heat is located in \_\_\_\_\_

\*Note if thermal mass is in slab, the depth of slab

\*Note if thermal mass is in trombe walls, and what the design is

Eave overhang will minimize overheating through a design of \_\_\_\_\_
